

IN THE SPECIFICATION:

On page 7, lines 14-18, to page 8, lines 1-2, please amend the paragraph to read as follows:

The embodiment shown in figures 1 to 6 comprises a basic body A, which is so designed that it can easily be hand-held. In the longitudinal direction a passage N passes through the basic body, the said passage N being limited at its outer extremity by two webs D, forming the first guide - also referred to in what follows as a two-dimensional (2D) wiper ~~2D-wiper~~ guide. On one end of the ~~2D-wiper~~ guide is situated a feeding aid (Figures 21, 23 and 24) ~~W-is situated~~. Due to the curvature of the ~~2D-wiper~~ guide, good positioning and slight pretensioning of the wiper blade, not shown, is brought about, promoting stabilization during cutting.

On page 8, lines 10-13, please amend the paragraph to read as follows:

In order to fix the positioning of the adjusting wheel, there is provided a screw G with a knurled head ~~is provided~~. The cutting unit B projects into the passage N and comprises

the second guide L, the lip cutting blade J, supported in part by element C, and an introduction passage K for the lip M of the wiper blade, which in Fig. 6 is fed from the right in the direction of the arrow.
